

Direct Observation of Physical Activity and Its Contexts

Seeing Is Believing, ALR 101

Thom McKenzie, Ph.D.

Professor Emeritus, School of Exercise and Nutritional Sciences
San Diego State University

February 9, 2010

Overview

- Background
- Research Issues
- Practical Issues
- Examples: Micro environments

Physical Activity Measures

➤ Accelerometers

- CALTRAC, CSA/Actigraph

➤ Self-reports

- Interviews or questionnaires
- (e.g., PAR, SAPAC)

➤ Proxy measures

- (e.g., heart rate monitors; doubly labeled water)

➤ Direct observation

- BEACHES, SOFIT, SOPLAY, SOPARC, SOCARP

Systematic Observation

- Direct method for assessing physical activity
- Permits simultaneous examination of physical and social environment
 - (location, presence of others, prompts, consequences)
- History
 - (Bullen '54; Hovell '78)
- Method, not an instrument

Systematic Observation

➤ Advantages

- Direct and objective measure
- High internal validity
- Assesses contextual variables
 - (e.g., social and physical environment)
- Suitable for aquatic environments
- Low participant (i.e., subject) burden
- Results understood by practitioners

Systematic Observation

Disadvantages

- Expense (observer time)
- Accessibility to all locations

Potential Sources of Error

- Reactivity
- Instrument Decay/Observer Drift
(Unintended changes in interpretation over time)

Aventuras para Niños

Feasibility of Direct Observation

- Training required
 - Depends upon complexity of system (number of activity and contextual codes)
- Time for measurement
 - Real time plus travel
 - Data entry
 - Recording and playback if video is used

Observer Training

- Memorize codes
- Directed practice using video segments
- Assessments using 'gold standard'
- Field practice
- Field reliabilities with certified assessor
- Additional training to prevent observer drift

Observation Techniques

- Frequency
- Duration (including latency)
- Time sampling/interval recording
 - Momentary time sampling
 - Partial interval recording
 - Whole interval recording

Interval Recording

- Typically short observe/record intervals
 - (6-10 seconds)
- Codes entered during 'record' intervals
- Activity codes vary among systems
 - 5 codes; BEACHES and CARS
 - 14 posture codes with 3 levels each (Bailey, '95)

Observation Systems

- Designed for specific purpose
 - BEACHES, SOFIT, SOCARP (individuals)
 - **SOPLAY, SOPARC (groups)**
- Key ingredients
 - Behavior categories
 - Observation protocols (e.g., pacing)
 - Coding conventions

Observation Systems

➤ **BEACHES**

- Individual children at home and elsewhere

➤ **SOFIT**

- PE and instructional classes

➤ **SOPLAY**

- Group behavior at leisure at school

➤ **SOPARC**

- Group behavior in parks and communities
- Includes age and race/ethnicity groupings

➤ **SOCARP**

- Individuals on playgrounds
- Includes group size, activity type, and social interactions

Methodological Considerations (1)

- **Validity** of codes
- Observer training
- **Reliability** measures
- Observer **drift/instrument decay**
- **Recalibration**
 - “Gold-standard” videotapes

System Validation (1)

- **Activity codes:**
 - heart rates, VO₂max, accelerometers, pedometers
- **Example:**
 - SOFIT/SOPLAY
 - heart rates (lab and field; ages 4-17)
 - accelerometer (elementary school PE, recess)
 - pedometers (PE)

Estimated Energy Expenditure

Kcal/kg/min

Reliability

Consistency:

degree to which independent, trained observers produce the same results when simultaneously observing:

- the same events
- using the same coding definitions, procedures, and conventions

Observer Variability

➤ Within Observer

- Examined using videotape technology during training and recalibration

➤ Between observers

- Called interobserver agreement or reliability
- Reported in different ways:
 - Interval by Interval (I-I)
 - Kappa (controls for chance agreement)
 - Intraclass correlations

Methodological Considerations (2)

➤ Sampling Adequacy

- Time periods (e.g., seasonality)
 - More than weather and temperature
- Time of day
- Week days vs. weekend days
- Enough teachers, students, parks

Physical Activity Data

- Typically summarized as:
 - Activity time in levels (minutes, hours)
 - Proportion of time (% of lesson or practice)
 - Estimated energy expenditure (kilocalories, METS)
- Number of people
- Proportion in activity levels

Physical Activity Occurs within Specific Environments

- In transport
- At home (play, work)
- Recreation (structured, unstructured)
- Sports (Youth, Senior)

- **Schools**
 - PE Classes; Intramurals; Interscholastics;
 - Clubs; Free Play

Environment

➤ Social

➤ Physical

When to Use Observational Assessments

- Formative
- Process
- Outcome

Home Settings

BEACHES Contexts

(Revised version, 2005)

- 1. Activity Level
 - (lie down, sit, stand, walk, vigorous)
- 2 Physical Location
 - (e.g., inside home, outside)
- 3 People Present
 - (e.g., parents, sibling, others)
- 4 Behavior Motivated
 - PA; Sedentary
- 5 Motivator
 - (Adult; Child)
- 6 Views Media
 - (No; Yes)
- 7 Eats
 - (No; Yes)

(McKenzie et al., 1991, JABA, 24, 141-151)

RESULTS: Physical Activity at Home

- **OVERALL: Children were**
 - Indoors 78% of the time
 - Sedentary 74% of the time
 - Vigorous only 11% of time
- **REDUCED ACTIVITY ASSOCIATED WITH:**
 - Being indoors ($p < .001$)
 - Parents being present ($p < .004$)
 - Time viewing media ($p < .001$)
 - Time ingesting food ($p < .05$)

McKenzie et al., *JPAH*, 2008

Aventuras para Niños

School Settings

**PE Classes; Recess;
Intramurals; Inter-scholastics;
Clubs; Free Play**

SOFIT Categories

➤ Physical Activity

- Lying Down, Sitting, Standing, Walking, Vigorous

➤ Lesson Context

- Management, Knowledge, Fitness, Skill Drills, Game Play, Other

➤ Instructor Behavior/Interactions

SOFIT Entry Form

Abbreviated

<u>Int</u>	<u>Activity</u>	<u>Context</u>	<u>Interactions</u>
1	1 2 3 4 5	M K F S G O	I O N
2	1 2 3 4 5	M K F S G O	I O N
3	1 2 3 4 5	M K F S G O	I O N

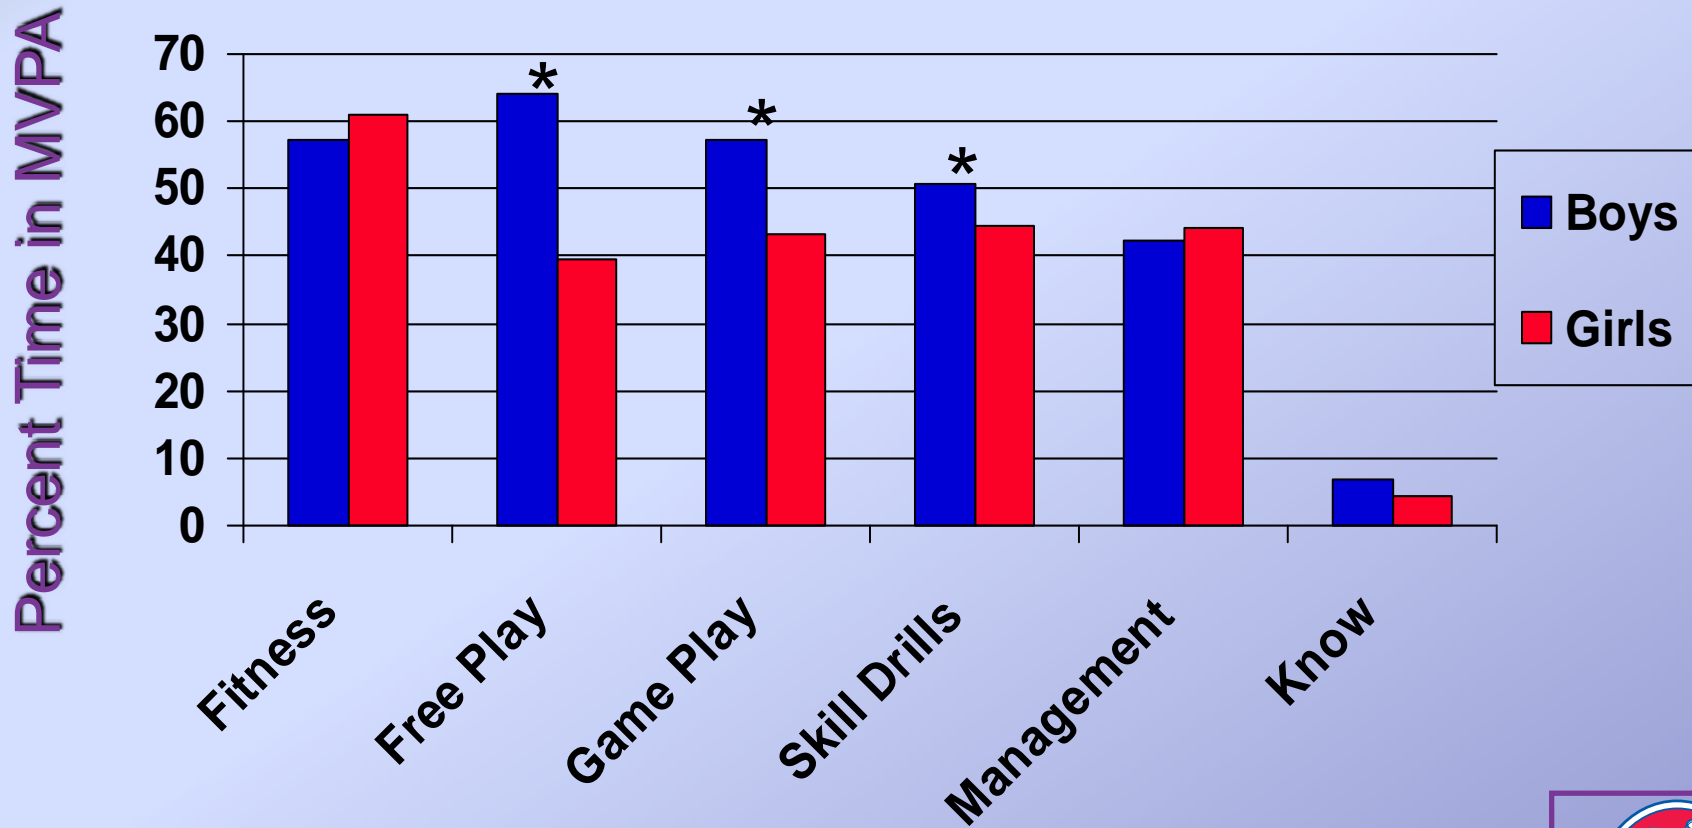

MVPA by Lesson Context

N=24 schools; 430 lessons; McKenzie et al, 2000, RQES

MVPA by Gender and Context

N=24 schools; 430 lessons ; McKenzie et al., 2000, RQES

CATCH PE: Short- and Long-Term Effects on MVPA in PE

(N=96 Elementary Schools; 2650 Lessons;
McKenzie et al., Prev Med, 1996; Health Ed & Beh, 2003)

If You Build It, Will They Come?

If They Come, Will They Be Active?

SOPLAY Categories

➤ Physical Activity

- (Sedentary, Walking, Very Active)

➤ Area Contexts

- (Accessible, Usable, Equipped, Supervised, Organized)

➤ Other Contexts

- (Time, Temperature, Predominant Activity/Sport)

SOPLAY

(McKenzie et al., 2000, Preventive Medicine)

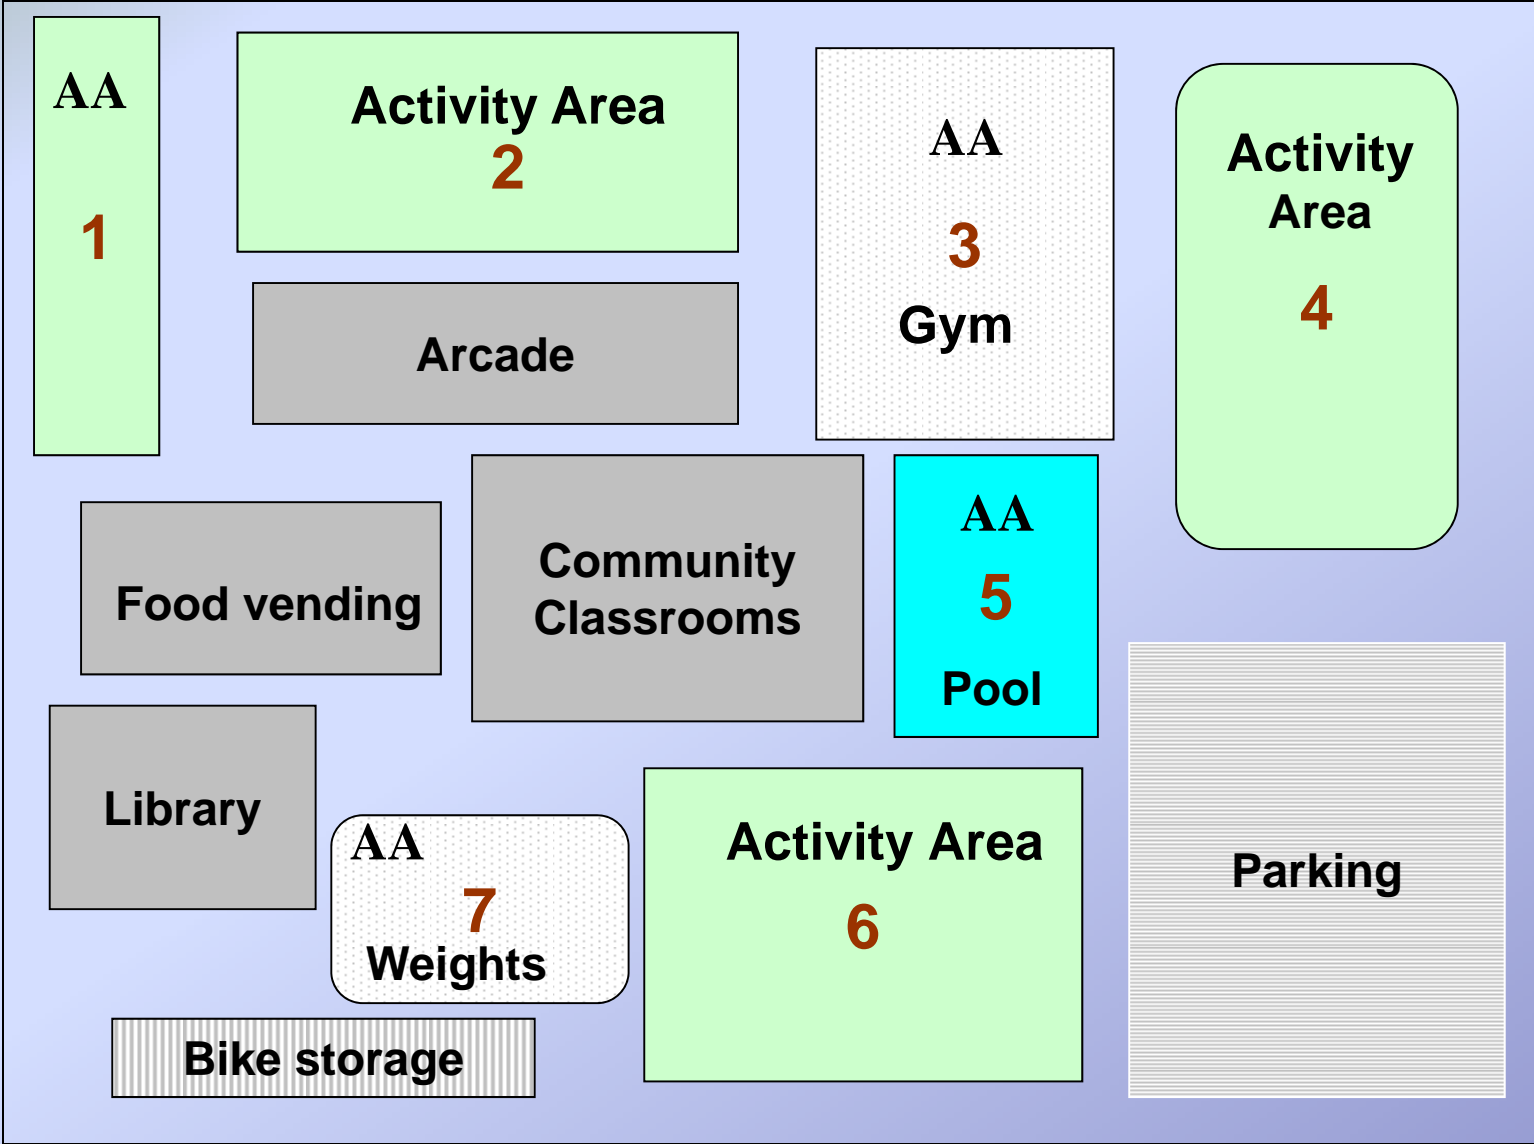

- Observers scan target areas and record activity intensity of each person
- Three levels: sedentary, walking, and vigorous
- Simultaneous entries for relevant PERSON and ENVIRONMENTAL characteristics

SOPLAY/SOPARC

Transitory Area Characteristics Assessed

- Accessible
- Usable
- Supervised
- Organized
- Equipped

McKenzie School-7 Activity Areas

Percent of School Population in Activity Areas

N=24 M-SPAN schools; 151 areas
(McKenzie et al., 2000, Preventive Medicine)

Percent in Activity Areas

N=24 M-SPAN schools; 151 areas
(McKenzie et al., 2000, Preventive Medicine)

MVPA by Gender

N=24 M-SPAN schools; 151 areas
(McKenzie et al., 2000, Preventive Med)

Community Settings

Parks and Recreation Centers

SOPARC

System for Observing Play and Recreation in Communities

T. McKenzie & D. Cohen

San Diego State University & RAND Corporation

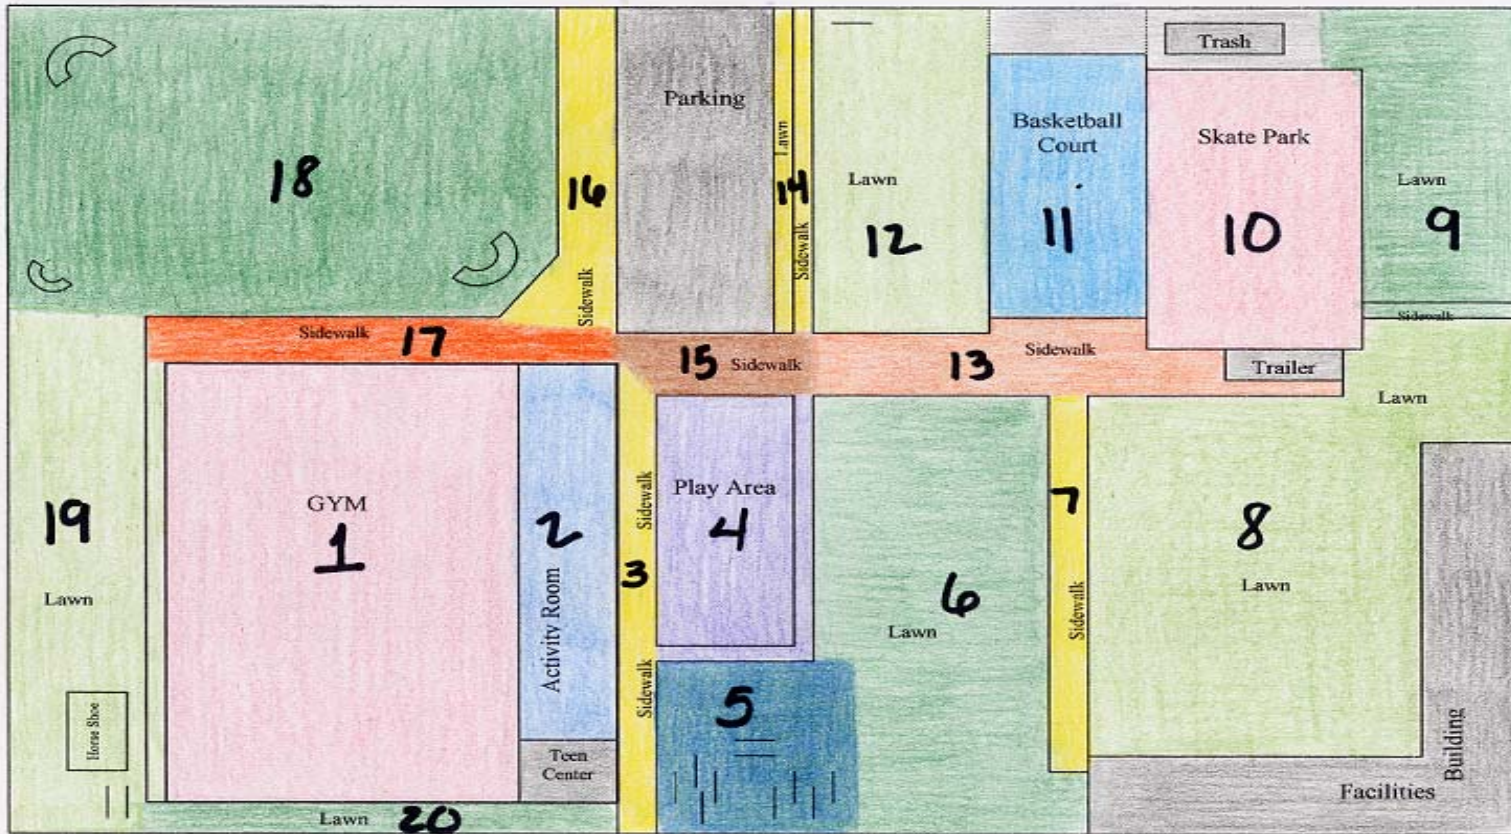

(McKenzie et al., *JPAH*, 2006)

PURPOSES

- Interest in health disparities
- Developed and assessed tool for studying PA and associated variables in community settings
- Used system in multi-ethnic communities to study park areas and characteristics of users, including their PA

WILMINGTON RECREATION CENTER

Neptune Avenue

Leavitt Park--OPEN Project

Justice Myron E. Leavitt Family Park

CITY OF LAS VEGAS 
Department of Leisure Services
Living...Beyond The Noon™

Legend

-  Target Zone
-  Trail observation point
-  Observation point

**37 Target Areas
-mostly sports**

First Study-Los Angeles

➤ LOCATION

- 8 neighborhoods:
- High household poverty ($X=35\%$; range= $16-55\%$)
- High % of minority groups (2000 census)
 - Latino, range= $16-55\%$
 - African-American, range = $0-88\%$

Data Sources

- Direct Observation (SOPARC)
 - (System For Observing Play and Active Recreation in Communities)
 - N=16,224 park users
- Interviews of Park Users
 - N=713 adults
- Interviews of Area Residents
 - N=605 adults from randomly selected homes >2 miles
- US 2000 Census

Observation Methods

PARKS

- 8 parks in multi-ethnic communities
- Size: Range=3.4-16.0 acres; Mean = 7.8 acres
- 165 Target Areas: Range/park =17-27; Mean =20.6

DATA COLLECTION

- 8 assessors trained systematically
- 56 clement days (7 in each park)
- 4 one-hour periods/day (7:30AM; 11:30AM; 3:30PM; 6:30PM)
- 4511 area visits

SOPARC Categories

- User Physical Activity Levels
 - (Sedentary, Walking, Vigorous)
- User Characteristics
 - (Gender, Age, Race/Ethnicity)
- User Activity Modes
 - (e.g., soccer, picnicking)
- Area Contexts
 - (Accessible, Usable, Equipped, Supervised, Organized)
- Other Contexts
 - (Day, Time, Temperature)

(McKenzie et al., *JPAH*, 2006)

Reliability Measures

BACKGROUND

- Observer-pairs conducted 472 simultaneous measures in 125 activity areas in 6 parks

AREA CHARACTERISTICS

- Accessibility, 98%; Usability; 94%; Supervised, 97%, Organized, 97%; Equipped, 99%

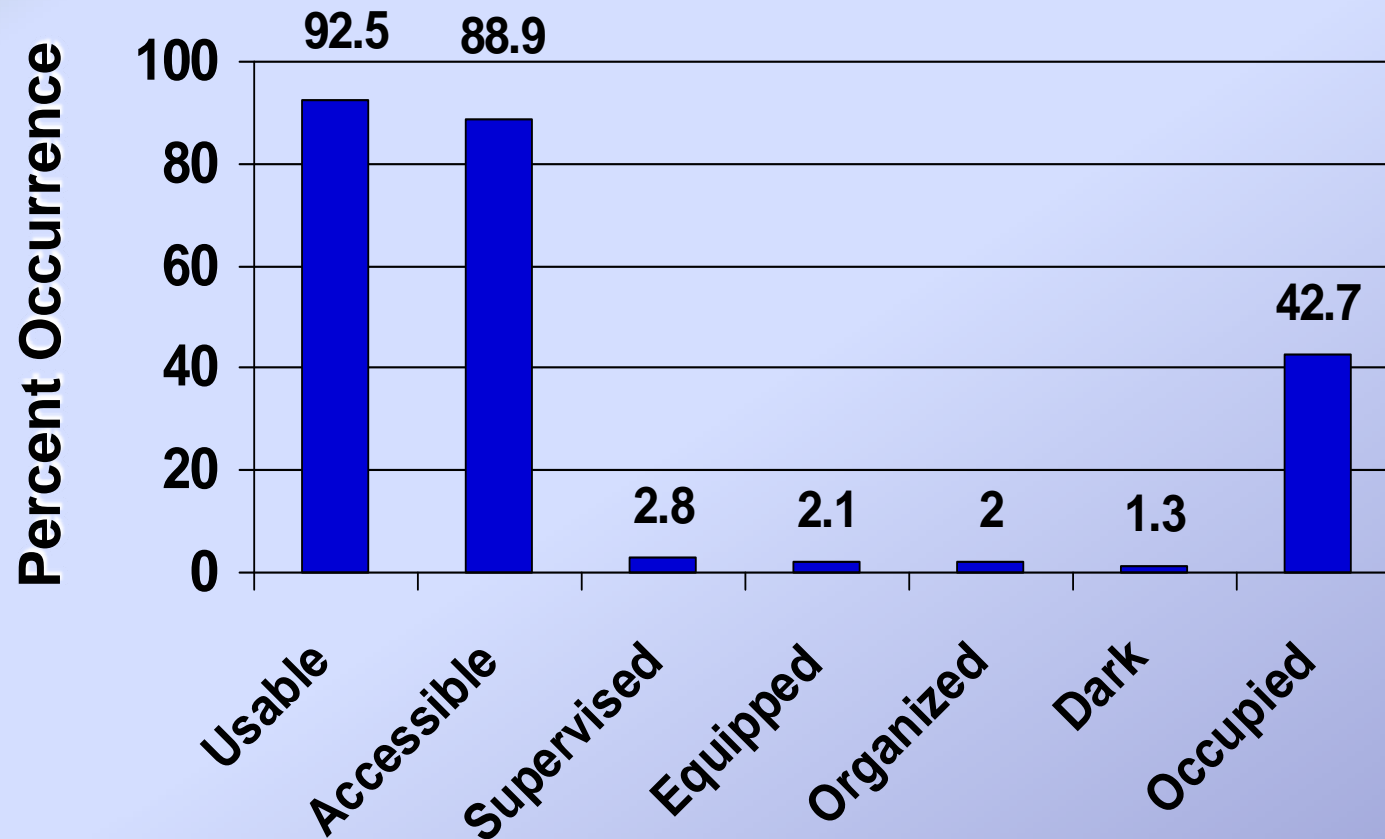

NUMBER COUNT FOR AREA

- Correlation=.99 for both females and males
- % Agreement= 92% females, 89% males

PEOPLE CHARACTERISTICS (Overall)

- Age Grouping: Females, 95%; Males, 97%
- Ethnic/Race Grouping: Females, 99%; Males, 99%
- Physical Activity Level: Females, 90%; Males, 88%

Characteristics of Activity Areas

N=8 Parks; 165 Activity Areas; 4511 Visits

% Activity Areas Occupied

Areas with Most MVPA

Park Users: Age Categories

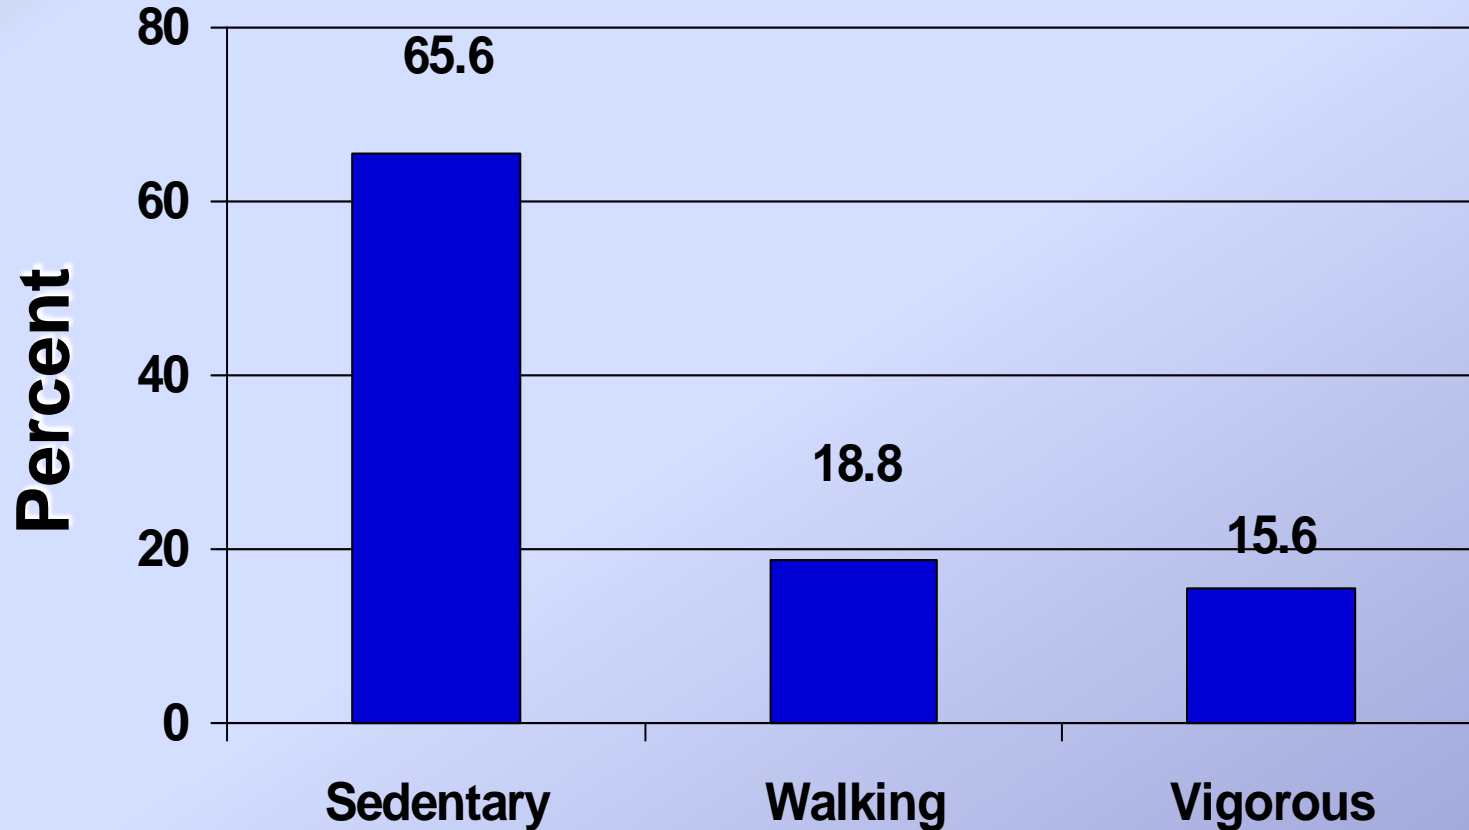

N=16,244 people; 165 activity areas; 56 days

Park Users: Gender and Age

N=16,244 people; 165 activity areas; 56 days

Physical Activity Levels

N=16,048 people; 165 activity areas; 56 days

Activity Levels by Gender

N=16,048 people; 165 activity areas; 56 days

Most Common Activities: Percent of Park Users

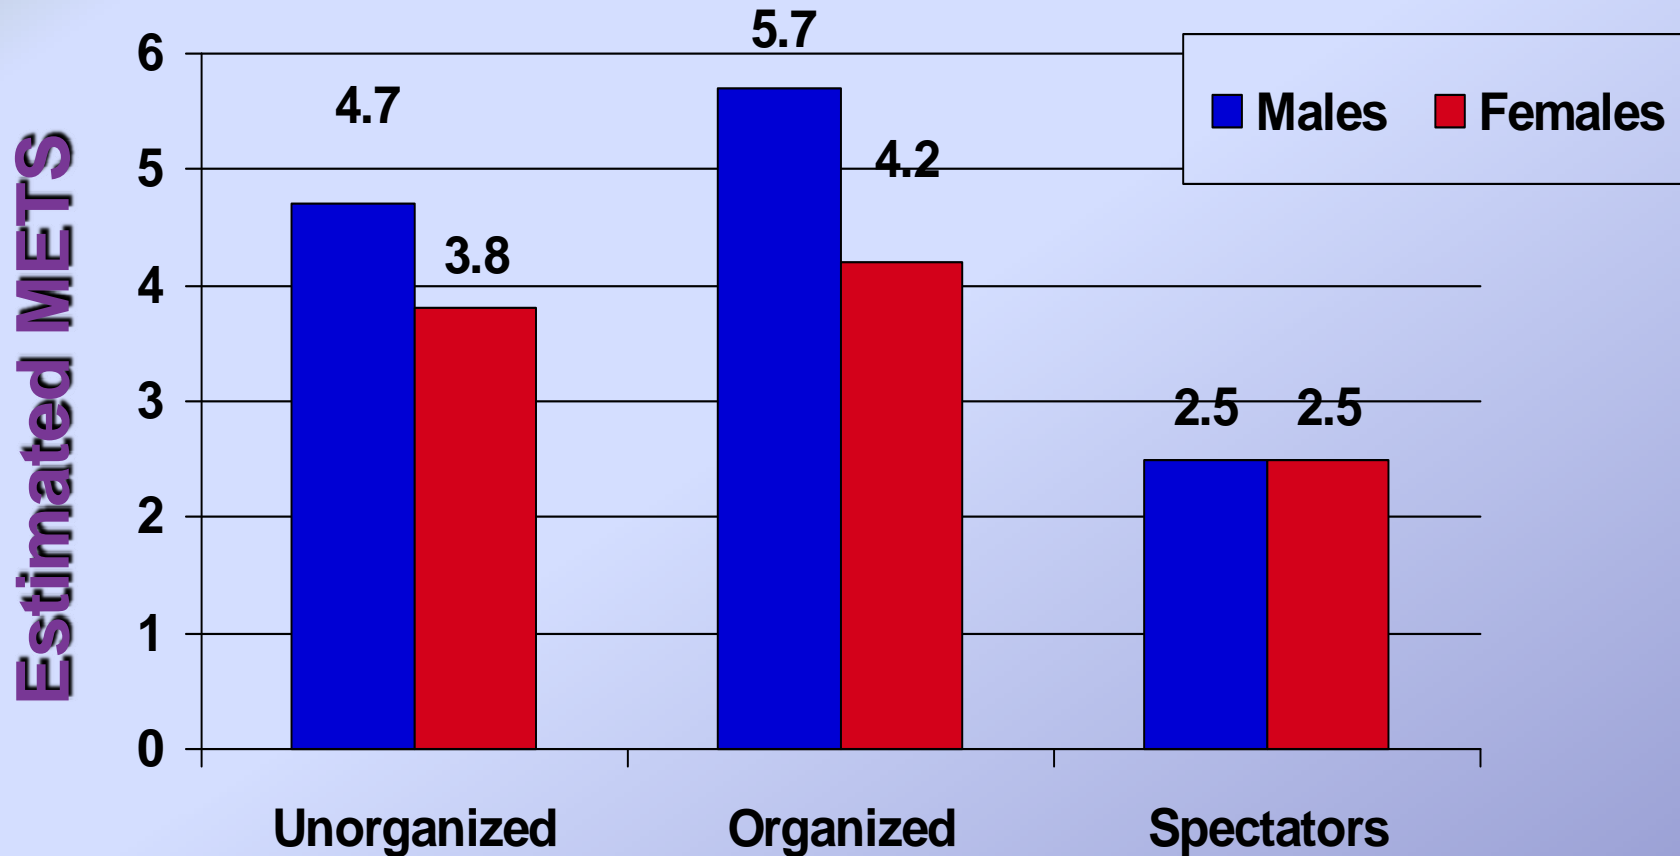

N=16,244 people; 165 activity areas; 56 days

% Park Users by Activity Type

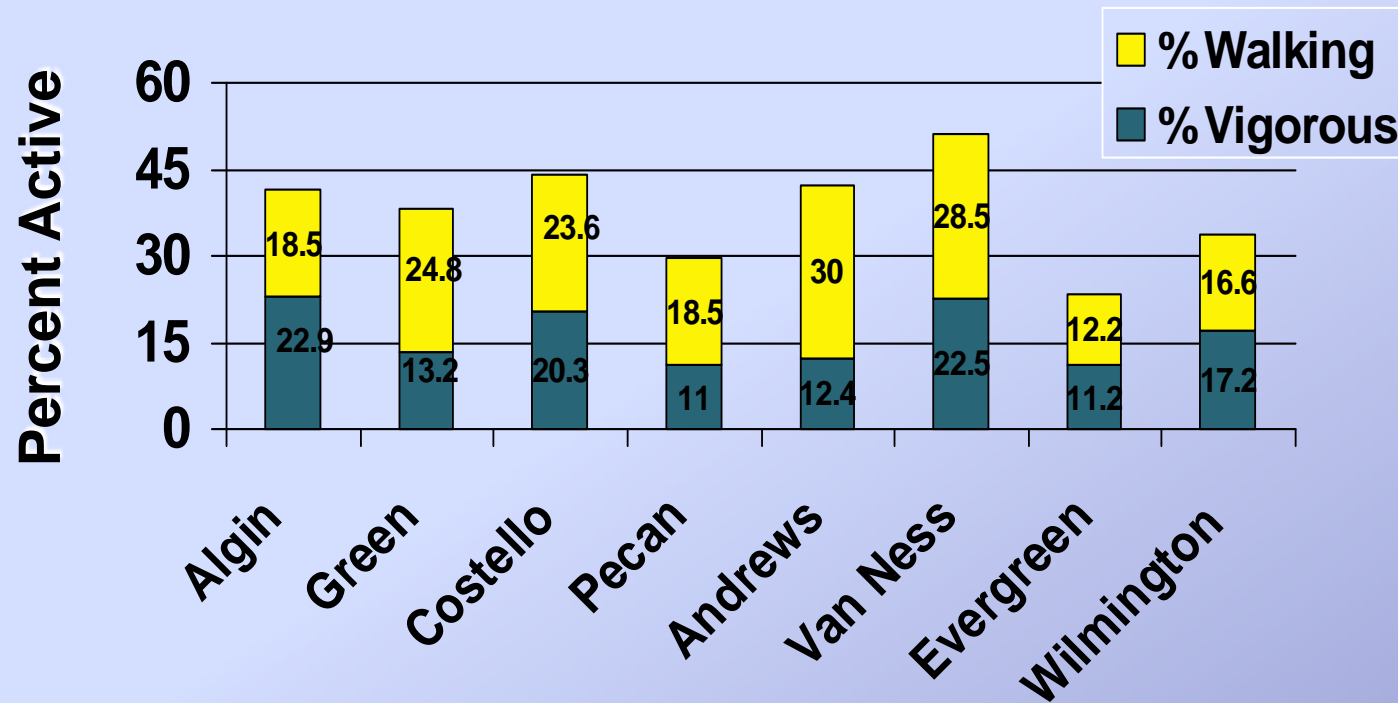

N=16,189 people; 165 activity areas; 56 days

METS by Activity Type

N=16,189 people; 165 activity areas; 56 days

Proportion Walking and in Vigorous Activity in 8 Parks

N=16,048 people; 165 activity areas; 56 days
