OUTLINE

- BACKGROUND + STUDY AIMS
- METHODS
- WALKING FOR TRANSPORTATION RESULTS
- PUBLIC TRANSIT USE RESULTS
- CONCLUSIONS + POLICY IMPLICATIONS
Walking for transportation + Public transportation use

Average time most Americans spend walking each day: 6 minutes

Median time public transit users spend walking each day: 19 minutes

Daily walking time recommended by CDC: 22 minutes

Graphic from Federal Transit Administration (http://www.fta.dot.gov/14504.htm)
Perceptions of the built environment can influence walking for transportation.\textsuperscript{1-7}

More information is needed about how perceptions of the built environment influence public transportation use.
Study aims

- Further assess the relationship between public transportation use and walking for transportation
- Examine the relationship between perceived environmental factors with public transportation use
Methods

- Data from St. Vincent Greenway Evaluation Study conducted in 2012
- Surveys mailed to random selection of households in 2 neighborhoods in St. Louis City, Missouri
- Eligibility criteria included being over 18 years old
- Total of 772 surveys were collected (response rate of 27%)
Study setting: St. Louis City, 2012

- Population of 318,172
- 49% Black or African-American
- 27% Live below Federal poverty level

- Public transportation system operated by Metro St. Louis
  - Bus services
  - Call-a-ride shuttle services
  - Light rail transit system serving 37 stations in greater St. Louis
Dependent Variables

- **Walking for transportation**
  IPAQ
  minutes of walking for transport during the last 7 days
  (0 minutes | 1-149 minutes | ≥ 150 minutes)

- **Public transportation use**
  number of days traveled by bus or train during the last 7 days
  (0 days | 1-4 days | ≥ 5 days)
Independent variables

- **Perceived built environment factors** I NEWS
  - Volume of traffic
  - Speed of traffic
  - Presence of crosswalks and pedestrian signals
  - Visibility of pedestrians and bicyclists
  - Nearby crime
  - Safety from crime during day
  - Safety from crime at night
  - Accessibility to sidewalks
  - Number of destinations within a ten-minute walk

- **Multinomial logistic regression** I STATA 12.0
Characteristics of study population (N=772)

- 64% Female
- 36% Male

- 17% 18-29 years
- 23% 30-39 years
- 18% 40-49 years
- 19% 50-59 years
- 23% ≥60 years

- 27% < $10,000
- 24% $10,000-$29,999
- 16% $30,000-$49,999
- 12% $50,000-$69,999
- 21% ≥ $70,000

- 43% Unemployed
- 57% Employed
Results | Walking for transportation

- 0 minutes: 34.3%
- 1-149 minutes: 34.7%
- 150+ minutes: 31.0%
Results | Public transportation use

</table>

*p<0.05
Odds ratios adjusted for gender, age, income, and employment status
Limitations

- Cross-sectional study design
- Low response rate
- Self-reported measures
- Relied on perceptions of built environment characteristics
Conclusions

- Public transportation use can support individuals in meeting physical activity recommendations by walking for transportation.

- Perceived environmental factors of traffic speed and neighborhood crime were negatively correlated with public transportation use in St. Louis City.
AMERICANS RIDING PUBLIC TRANSIT IN RECORD NUMBERS

Palestinians board a train at Union Station Friday March 7, 2014 in Los Angeles. Americans are boarding public buses, trains and subways in greater numbers than any time since the suburbs began to boom. Nearly 10.7 billion trips in 2013, to be precise, the highest number since 1956. (AP Photo/Nick Ut)
Policy + Practice Implications

- Implement strategies to **decrease traffic speed on roadways**

- Explore opportunities to **enhance personal safety features on buses and trains and near transit stops**

- Collaborate with law enforcement officials to **increase police presence** near bus and train stops
THANK YOU!
