

Systematic Observation of Physical Activity and Its Contexts

Thom McKenzie, Ph.D.
Professor Emeritus, San Diego State University

Monica Lounsbery, Ph.D.
Professor, University of Nevada, Las Vegas

Overview

- Background
- Research Issues
- Practical Issues
- Examples:
 - Home, School, & Park environments

Physical Activity is Complex! Some Questions Arise

- Under what conditions are people most and least active and....
 - Where were they?
 - What were they doing?
 - Who was present?
 - Were there differences among demographic groups?
 - What PA supports or barriers were present?

Ecological Approach to Activity Promotion

- Identifies times and places for PA
- Identifies social & physical resources/barriers
- Identifies policies that hinder/facilitate PA
- Modifies these factors to attract people and promote PA opportunities

Systematic Observation

- Direct method for assessing physical activity
- Permits simultaneous examination of physical and social environment
 - (location, presence of others, prompts, consequences)
- History
 - (Bullen '54; Hovell '78)
- Method, not an instrument

Systematic Observation

- Advantages
 - Direct and objective measure
 - High internal validity
 - Assesses contextual variables
 - (e.g., social and physical environment)
 - Suitable for aquatic environments
 - Low participant (i.e., subject) burden
 - Results understood by practitioners

Systematic Observation

➤ Disadvantages

- Expense (observer time)
- Accessibility to all locations
- Potential subject reactivity

Feasibility of Systematic Observation

- Observer training required
 - Depends upon complexity of system (number of activity and contextual codes)
- Time for measurement
 - Real time plus travel
 - Data entry
 - Recording and playback if video is used

Use of Video

- Needed for observer training and assessment
 - Include each variable; have diverse examples
- Challenges with video data collection
 - Human subjects considerations
 - Potential subject reactivity
 - Increased costs
 - Avoid mixing live and video data

Observer Training

- Memorize codes
- Directed practice using video segments
- Assessments using 'gold standard' video
- Field practice
- Field reliabilities with certified assessor
- Additional training to prevent observer drift

DVD Information

- Content
 - Definitions and examples
 - Samples with practice codes
 - Samples with code delays
 - Assessment videos
- Availability
 - North Carolina State (via ITUNES U)
 - E-mail request to ALR

Observation Techniques

- ◆ Frequency
- ◆ Duration (including latency)
- ◆ Time sampling/interval recording
 - ◆ Momentary time sampling—**SOPLAY & SOPARC**
 - ◆ Partial interval recording
 - ◆ Whole interval recording

Observation Systems

- **Designed for specific purpose**
 - (BEACHES, SOFIT, SOPLAY, SOPARC, SOCARP)
- **Key ingredients**
 - Behavior categories
 - Observation protocols (e.g., pacing)
 - Coding conventions

Observation Systems -Individual Behavior-

- **SOFIT**
 - PE and instructional classes
- **SOCARP**
 - Individuals on playgrounds
 - Includes group size, activity type, and social interactions
- **BEACHES**
 - Individual children at home and elsewhere

Interval Recording

- ◆ **Typically short observe/record intervals**
 - ◆ (6-10 seconds)
- ◆ **Codes entered during 'record' intervals**
- ◆ **Activity codes vary among systems**
 - ◆ 5 codes; BEACHES and CARS
 - ◆ 14 posture codes with 3 levels each (Bailey, '95)

Pacing Observations Entering Data

- **Duration** (Computer; each key is toggle switch)
- **Interval**
 - Computer
 - Audiotape tape/CD/MP3/IPOD
- **Data entry**
 - Computer
 - Hand score
 - Form
 - Scantron

Observation Systems -Areas and Facilities-

- **SOPLAY**
 - Group behavior at leisure at school
- **SOPARC**
 - Group behavior in parks and communities
 - Includes age and race/ethnicity groupings
- **SOPARNA**
 - Group behavior in wilderness areas
 - Includes group size, activity modes

Methodological Considerations (1)

- **Validity of codes**
- **Observer training**
- **Reliability measures**
- **Observer drift/instrument decay**
- **Recalibration**
 - "Gold-standard" videotapes

Methodological Considerations (2)

➤ Sampling Adequacy

- Time periods (e.g., seasonality)
 - More than weather and temperature
- Time of day
- Week days vs. week ends
- Enough teachers, students, parks

System Validation (1)

▪ Activity codes:

- heart rates, VO₂max, accelerometers

▪ Example:

- SOFIT/SOPLAY Activity Codes
 - heart rates (lab and field; ages 4-17)
 - accelerometer (PE and recess)
 - pedometers

System Validation (2)

▪ Additional validation

- Momentary time sampling vs. duration recording
- Interval length
- Live vs. video records
- Persons with mental retardation or cerebral palsy
- Ice hockey

Observer Variability

➤ Within Observer

- Examined using video technology during training and recalibration

➤ Between observers

- Called interobserver agreement or **reliability**
- Reported in different ways:
 - Kappa (controls for chance agreement)
 - Interval by Interval (I-I)
 - Intraclass correlations

Physical Activity Data

➤ Typically summarized as:

- Activity time in levels (minutes, hours)
- Proportion of time (% of lesson or practice)
- Estimated energy expenditure (kilocalories, METS)

Estimated Energy Expenditure

Physical Activity Occurs within Specific Environments

- At home (play, work)
- Schools
 - PE Classes; Intramurals; Inter-scholastics;
 - Clubs; Free Play/Recess
- Recreation centers (structured, unstructured)
- Parks and trails
- In transport

Home Settings Have Changed!

Increase in electronic media

- access to TVs, DVDs, smart phones
- number of channels, pay TV
- number child focused programs

BEACHES Contexts (Newer version)

Aventuras para Niños

No Child Left Inside!

McKenzie et al. (2008). Environmental Correlates of Physical Activity in Mexican-American Children at Home (JPAH).

RESULTS: Physical Activity at Home

- **OVERALL:** Children were
 - Indoors 78% of the time
 - Sedentary 74% of the time
 - Vigorous only 11% of time
- **REDUCED ACTIVITY ASSOCIATED WITH:**
 - Being indoors (p<.001)
 - Parents being present (p<.004)
 - Time viewing media (p<.001)
 - Time ingesting food (p<.05)

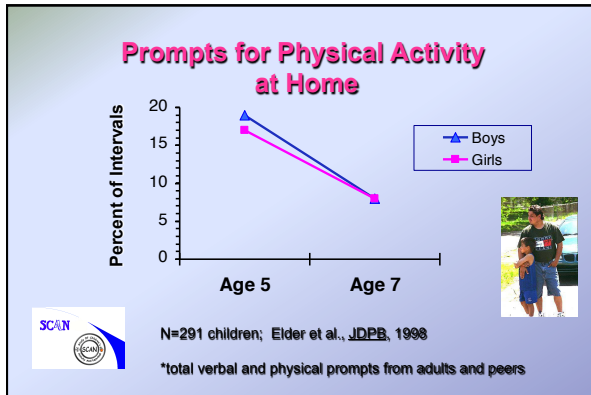

Aventuras para Niños

MVPA OF PRECHOOLERS AT RECESS AND HOME

(N= 351; McKenzie et al., 1992, *JBDT*)

School Settings

- Physical Education
- Recess/free play

R

“If Exercise is Medicine, PE is the Pill Not Taken”

Lack of regulation (policy, accountability)

- Dosage (frequency, duration, intensity)
- Prescriber (training)
- Content (appropriateness, sound)
- Delivery (palatable)

McKenzie & Lounsbery, *AJLM*, 2009

SOFIT Categories

- Physical Activity
 - Lying Down, Sitting, Standing, Walking, Vigorous
- Lesson Context
 - Management, Knowledge, Fitness, Skill Drills, Game Play, Other
- Instructor Behavior

SOFIT Entry Form Abbreviated

Int	Activity	Context	Interactions
1	1 2 3 4 5	M K F S G O	I O N
2	1 2 3 4 5	M K F S G O	I O N
3	1 2 3 4 5	M K F S G O	I O N

SOFIT Categories

- Lesson Context: (How the lesson content is delivered)
 - Management
 - Knowledge
 - Fitness
 - Skill Drills
 - Game Play
 - Free Play

SOPLAY Categories

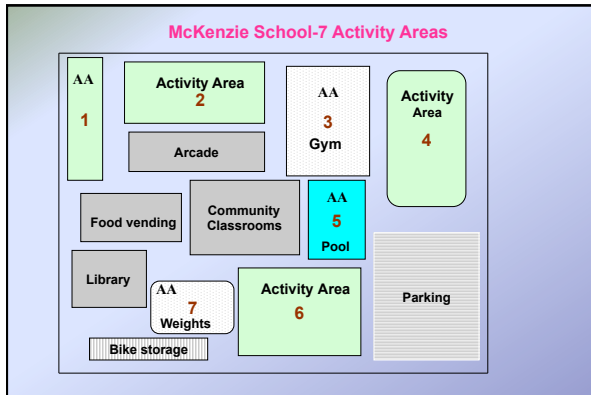

- > Physical Activity
 - (Sedentary, Walking, Vigorous)
- > Area Contexts
 - (Accessible, Usable, Equipped, Supervised, Organized)
- > Other Contexts
 - (Time, Temperature, Predominant Activity/Sport)

SOPLAY

(McKenzie et al., 2000, Preventive Medicine)

- > Observers scan target areas and record activity intensity of each person
- > Three levels: sedentary, walking, and vigorous
- > Levels validated via heart rates enable energy expenditure in area to be estimated
- > Simultaneous entries for relevant environmental characteristics

System for Observing Play and Recreation in Communities: SOPARC

T. McKenzie & D. Cohen
San Diego State University & RAND Corporation

Journal of Physical Activity and Health, 1, 2004-2017
© 2004 Human Kinetics, Inc.

System for Observing Play and Recreation in Communities (SOPARC): Reliability and Feasibility Measures

Thomas L. McKenzie, Deborah A. Cohen, Amber Sehgal, Stephanie Williamson, and Daniela Golinelli

- Developed in 2003
- Validated (2 NIH grants)
- Widely used (translated into four languages)
- Numerous published papers

Mapping the Park

- Print out satellite map (from Google)
- Walk around the park, get a feel for it
- Identify the target areas
- Draw them
- See mapping guide for details

Data Sources

- Direct Observation (SOPARC)
 - (System For Observing Play and Active Recreation in Communities)
 - N=16,224 park users
- Interviews of Park Users
 - N=713 adults
- Interviews of Area Residents
 - N=605 adults from randomly selected homes >2 miles
- US 2000 Census

Observation Methods

PARKS

- 8 parks in multi-ethnic communities
- Size: Range=3.4-16.0 acres; Mean = 7.8 acres
- 165 Target Areas: Range/park =17-27; Mean =20.6

DATA COLLECTION

- 8 assessors trained systematically
- 56 clement days (7 in each park)
- 4 one-hour periods/day (7:30AM; 11:30AM; 3:30PM; 6:30PM)
- 4511 area visits

RAND Health

SOPARC Categories

- User Physical Activity Levels
 - (Sedentary, Walking, Vigorous)
- User Characteristics
 - (Gender, Age, Race/Ethnicity)
- User Activity Modes
 - (e.g., soccer, picnicking)
- Area Contexts
 - (Accessible, Usable, Equipped, Supervised, Organized)
- Other Contexts
 - (Day, Time, Temperature)

(McKenzie et al., 2006)

Reliability Measures

BACKGROUND

- Observer-pairs conducted 472 simultaneous measures in 125 activity areas in 6 parks

AREA CHARACTERISTICS

- Accessibility, 98%; Usability; 94%; Supervised, 97%, Organized, 97%; Equipped, 99%

NUMBER COUNT FOR AREA

- Correlation=.99 for both females and males
- % Agreement= 92% females, 89% males

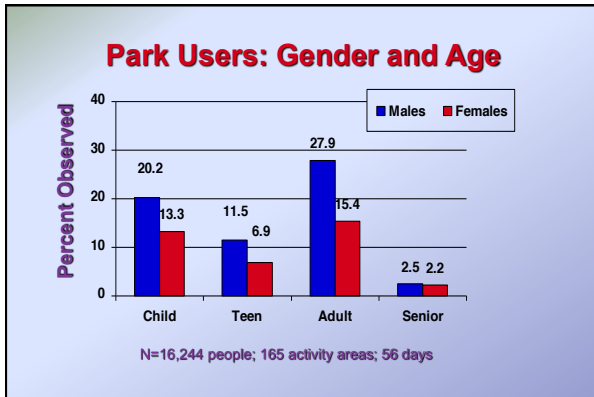

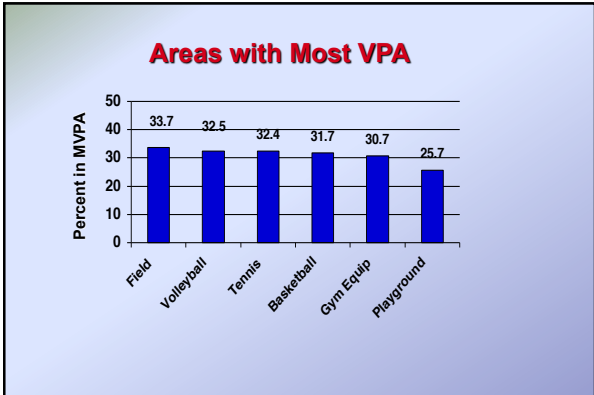

PEOPLE CHARACTERISTICS (Overall)

- Age Grouping: Females, 95%; Males, 97%
- Ethnic/Race Grouping: Females, 99%; Males, 99%
- Physical Activity Level: Females, 90%; Males, 88%

Characteristics of Activity Areas

N=8 Parks; 165 Activity Areas; 4511 Visits

Journal of Physical Activity and Health, 2011, 8, 1017-1028

How Much Observation Is Enough? Refining the Administration of SOPARC

Deborah A. Cohen, Claudia Setoaji, Kelly R. Evenson, Phillip Ward, Sandra Luchman, Amy Hillier, and Thomas L. McKenzie

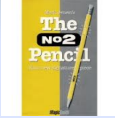

Observations of Play and Recreation in Communities (SOPARC) was designed to assess the use of neighborhood parks by monitoring their availability, their schedule, use patterns, and documenting the amount of activity observed. This information is used to estimate the amount of physical activity observed every hour for 14 hours per day during 1 summer and 1 winter month in each of Los Angeles, CA, Albuquerque, NM, Columbus, OH, Durham, NC, and San Francisco, CA. SOPARC was designed to be used by a single observer every hour for 14 hours per day during 1 summer and 1 winter month in each of Los Angeles, CA, Albuquerque, NM, Columbus, OH, Durham, NC, and San Francisco, CA. SOPARC was designed to be used by a single observer every hour for 14 hours per day during 1 summer and 1 winter month in each of Los Angeles, CA, Albuquerque, NM, Columbus, OH, Durham, NC, and San Francisco, CA. SOPARC was designed to be used by a single observer every hour for 14 hours per day during 1 summer and 1 winter month in each of Los Angeles, CA, Albuquerque, NM, Columbus, OH, Durham, NC, and San Francisco, CA.

-4 times/day
-4 days (2 weekdays, Sat, & Sun)

**Predicts park use, including:
Number, gender, PA levels, & age and race/ethnicity groupings**

The OPEN Partnership: Observing Park Environments in Nevada (Lounsbury, PI)

- Increased emphasis on translational research and engaging practitioners
- It not only provides experiences for university personnel, but can make a difference in the lives of people
- OPEN provides an example of a collaborative effort (study concept & design and in-kind contributions)

Purpose

- PA studies not been conducted in Nevada parks
 - health impacts have not been translated into local government leisure services
- Overall purpose:
 - assess park users and characteristics
 - identify park characteristics associated with use and physical activity
 - examine resident profiles, perceptions, and use of park/trail environments

Study Locations

Park & Trail Selection

- City & County determined study parks and trails
 - 6 parks (4 county, 2 city) and 4 trails (3 county, 1 city)
- City & County determined target areas with University

67

SOPARC

Staff Observer Training

- University personnel did training, reliabilities, and analyses
- Trained county and city staff (n=28) to use SOPARC
 - Staff assigned to collect data in specific parks
 - Training and data collection took place during staff hours

68

Results & Discussion

- Most park users were adult and male
- People were mostly sedentary when observed
- Males were more active than females
- Few attendees in target areas with the most PA
- Few target areas organized or supervised
- Tremendous interest in data by parks/recreation leaders

Collaborative Investment

City of Las Vegas

- 321 staff hours for SOPARC training & data collection
- approximately \$13,500 in staff time plus travel expenses

Clark County

- 750 staff hours for SOPARC training & data collection
- approximately \$31,500 in staff time plus travel expenses

UNLV PPRP

- \$11,000 for equipment & part-time coordinator
- training, IOA data collection, & data analyses
- approximate value of \$13,750 (.16 FTE; 40 hours RGA time)

Observing PA and Its Contexts: Take Home Messages

- SOFIT/SOPLAY/SOPARC PA codes have been validated
 - if you modify them, additional validation is needed
- Create your own or modify current systems
 - Determine what you want to know
 - Prioritize—you cannot observe it all
 - Operationalize categories, validate them, test for reliability
 - Coding conventions increase reliability
- Observation techniques differ between systems, and depend upon the research question(s)
